

Release Notes - SysREL 1R21B2

Communications

- iBC-Z: Improved communications with URYU UBX-AFxxxZ series tools. Previously rundown/results time from tool could take ~3 seconds depending on environmental conditions and rundown complexity. Improved rundown/results displayed by controller in ~1 second.
- High resolution curve data has been removed from recording and presentation in order to preserve transfer speeds over Zigbee. Final torque and angle are plotted against cycle time, starting from 0 Nm and 0 degrees.

Open Protocol

- Corrected Open protocol JOB results reporting the batch size. This was caused by attempting to assure the rundown result is sent prior to the JOB status.
